Ter Waele Habiba

Wateringen, 07-12-2018

To whom it may concern,

On september 21st 2017 the horse Ter Waele Habiba (52821004436605) was presented to our practice with a large, acute wound on the left side of the thorax. Due to complications after woundclosure, the wound healed through secondary healing, leaving a scar on the left side of the thorax.

There were no internal organs affected by this wound and its healing.

Considering the nature of the wound and its healing I do not see a problem for this filly to be bred and carry a foal to term.

Kind Regards,
Drs. Esmeralda van der Elst, DVM
